

AMENDMENTS TO THE CLAIMS

Claim 1 (Previously Presented) A wireless terminal communication method in a network, the network comprising, a plurality of wireless terminals, and a terminal location database for controlling position information of the wireless terminals, the wireless terminal communication method comprises the steps of:

B1
inquiring to the terminal location database by a mobile wireless terminal for a position information of a destination mobile wireless terminal of the wireless terminal; and

communicating with the destination wireless terminal to share data between the wireless terminal and the destination wireless terminal when the wireless terminal has received the position information of the destination wireless terminal from the terminal location database.

Claim 2 (Currently Amended) ~~The wireless terminal communication method as defined in claim 1, further comprising:~~ A wireless terminal communication method in a network, the network comprising, a plurality of wireless terminals, and a terminal location database for controlling position information of the wireless terminals, the wireless terminal communication method comprises the steps of:

inquiring to the terminal location database by a wireless terminal for a position information of a destination wireless terminal of the wireless terminal;

communicating with the destination wireless terminal to share data between the wireless terminal and the destination wireless terminal when the wireless terminal has received the position information of the destination wireless terminal from the terminal location database;

broadcasting periodically a position and address of the terminal location database by the terminal location database; and

wherein the wireless terminal makes an inquiry to the terminal location database based on the broadcast position and address.

B |
Claim 3 (Previously Presented) A wireless terminal communication method in a network, the network comprising, a plurality of wireless terminals, and a terminal location database for controlling position information of the wireless terminals, the wireless communication method comprises the steps of:

broadcasting periodically a position and address of the terminal location database by the terminal location database; and

communicating from a wireless terminal to a destination wireless terminal to share data between the wireless terminal and the destination wireless terminal based on the broadcast position

and address.

Claim 4 (Original) The wireless terminal communication method as defined in claim 1, wherein the terminal location database replies pending to the inquiring step to the terminal location database by the wireless terminal unless the destination wireless terminal is registered; and

B1 wherein the terminal location database replies to the inquire after the destination wireless terminal enters and registers the desired position.

Claim 5 (Original) The wireless terminal communication method as defined in claim 1, wherein the wireless terminal determines a priority order of the inquiries, and sends the inquiring step according to the priority order.

Claim 6 (Previously Presented) A wireless terminal communication method in a network, the network comprising, a plurality of wireless terminals, and a terminal location database for controlling the position information of the wireless terminals, the wireless terminal communication method comprises the steps of:

inquiring to the terminal location database by a wireless terminal for a position information of a destination wireless terminal of the wireless terminal; and

communicating with the destination wireless terminal when the wireless terminal has received the position information of the destination wireless terminal from the terminal location database,

wherein the terminal location database searches for an intermediate terminal to the inquiring step unless the direct communication between the wireless terminal and the destination wireless terminal is possible, and replies to the inquiring step to the terminal location database including the name of the searched intermediate terminals to the wireless terminal.

B)

Claim 7 (Original) The wireless terminal communication method as defined in claim 6, wherein the terminal location database sets up a route information; and further comprising; sending the route information to the intermediate terminals.

Claim 8 (Original) The wireless terminal communication method as defined in claim 1, further comprising:

exchanging periodically the position information of the wireless terminals by the terminal location database.

Claim 9 (Original) The wireless terminal communication method as defined in claim 1, wherein the terminal location database has an address and an ad hoc wireless network interface,

and connects to the ad hoc wireless network.

Claim 10 (Previously Presented) The wireless terminal communication method as defined in claim 8, further comprising:

notifying to an other terminal location database who can respond to the inquiry after the terminal location database receives an inquiry regarding a relevant information from the wireless terminal; and

B1 wherein the wireless terminal makes an inquiry to the other terminal location database based on this notification of the position of the other terminal location database.

Claim 11 (Original) The wireless terminal communication method as defined in claim 1, wherein the terminal location database refers and replies to the inquiring step the position information of the wireless terminals controlled by the cellular phone network.

Claim 12 (Previously Presented) A wireless communication system using a network of a plurality of wireless terminals, comprising:

a terminal location database to control position information of the plurality of wireless terminals;

a mobile wireless terminal to inquire the terminal location database for the position information of a destination mobile wireless terminal; and

a communication control mechanism on the wireless terminal to control direct communication between the wireless terminal and the destination wireless terminal.

B1 Claim 13 (Currently Amended) ~~The wireless communication system of claim 12,~~ A wireless communication system using a network of a plurality of wireless terminals, comprising:

a terminal location database to control position information of the plurality of wireless terminals;

a wireless terminal to inquire the terminal location database for the position information of a destination wireless terminal; and

a communication control mechanism on the wireless terminal to control direct communication between the wireless terminal and the destination wireless terminal;

wherein the terminal location database periodically broadcasts a position and address of the terminal location database.

Claim 14 (Previously Presented) ~~The wireless communication system of claim 12,~~ further comprising an intermediate terminal to

facilitate communication between the wireless terminal and the destination wireless terminal.

Claim 15 (New) The method of claim 1, wherein said communicating reduces congestion in the network.

Claim 16 (New) The method of claim 1, wherein said inquiring includes inquiring to the terminal location database via a roadside communication device wherein said mobile wireless terminal being co-located with a first vehicle and said destination mobile wireless terminal being co-located with a second vehicle.
